

## **InventHelp® Client Invents "Bright Sight" -- An Invention That Could Enhance the Bowhunting Experience**

*InventHelp® is currently attempting to submit the invention to companies for review.*

Pittsburgh, PA ([PRWeb](#)) March 7, 2008 --

InventHelp®, America's leading inventor service company, announces that two of its clients, inventors from Lilly, Pa., have designed an accessory for bowhunting. This invention is patented and a prototype is available.

The "Bright Sight" would be convenient for those who are bowhunting in dimly lit conditions. The device would be user-friendly and require little movement that might spook an animal. The unit would feature a design suitable for mounting on any bow.

The Bright Sight would consist of a steel or aluminum alloy frame, along with a mounting bracket similar to a conventional sight. The unit would measure five inches long, three inches high and two ½- inches wide. The device would include one-to-five adjustable sight pins, or a single pin mounted on a pendulum. A light source that illuminates the fiber-optic filaments would be located at the bottom of the mounting bracket. This light source could be controlled by a small switch, which would be positioned on the grip. The construction could be developed for right- or left-handed mounting.

InventHelp<sup>®</sup> is attempting to submit the invention to companies for review. If substantial interest is expressed, the company will attempt to negotiate for a sale or royalties for the inventor. For more information, telephone Dept. 03-WGH-2404 at (800)
