GTT To Sell Fundamental Mobile VoIP Patent Portfolio

Portland, Oregon (March 14, 2008) -- Global Technology Transfer Group, Inc., (GTT), a world leader in patent asset management services, has announced the availability of a fundamental patent portfolio dealing with VoIP communications over wireless devices. The portfolio is entitled "Mobile VoIP Patent Portfolio" and consists of one US patent, one US patent application and a number of foreign counterparts.

The key point of novelty of the patent relates to running VoIP software on a device, converting voice information into data formatted for transmission over a network, and exchanging that data with a network using a short range wireless connection such as Bluetooth or WiFi (802.11).

Many cellular telephones, internet tablets, laptop computers, and other portable devices are capable of running VoIP software and connecting to a network over a WiFi connection. There are also a number of companies that offer VoIP software that can be installed and run on these devices. In some instances, the VoIP software is pre-installed and available for use with a wireless connection out of the box.

GTT has analyzed the patent portfolio and prepared a detailed marketing report highlighting the technology, potential markets and presented examples of Direct Evidence of Use.

"Because VoIP has emerged as a key feature on mobile, portable and handheld devices, this portfolio will attract strong interest from major players in several markets." said Michael Lubitz, Chairman and CEO of GTT. "GTT is privileged to be exclusively representing the sale of these patents."
